

GH2Clean Joins the African Hydrogen Partnership

Beverly Hills (USA), Port Louis (Mauritius) - 10 May 2024

The African Hydrogen Partnership (AHP) is delighted to announce that GH2Clean has become the first member organization from the United States to join the African Hydrogen Partnership. GH2Clean is part of the California hydrogen hub initiative.

As part of President Biden's Investing in America agenda, the U.S. Department of Energy (DOE) has launched seven Regional Clean Hydrogen Hubs (H2Hubs) across the U.S. and accelerated the commercial-scale deployment of low-cost, clean hydrogen. The seven H2Hubs will kickstart a national network of clean hydrogen producers, consumers, and connective infrastructure while supporting the production, storage, delivery, and end-use of clean hydrogen.

US member organizations like GH2Clean provide the AHP with access to valuable partnerships and give the AHP a stronger voice in advocating for policy changes or industry standards.

Ron R. Chevalier, CEO at GH2Clean, stated,

"As the first US-based company to join the African Hydrogen Partnership, GH2Clean is honored to be part of a collaborative effort that champions innovation and drives significant change in the hydrogen industry. The partnership allows us to contribute our expertise while also learning from the rich insights that the AHP provides. We look forward to fostering valuable connections and supporting policies that will help advance clean hydrogen both in Africa and globally. Joining forces with the AHP is a crucial step towards a more sustainable future, and we're excited to be at the forefront of this journey."

Dr Innocent Uwujaren, AHP Chairman, said,

"We are thrilled to welcome GH2Clean to the AHP as our first member from the United States! Ron Chevalier and his team bring a wealth of experience and knowledge in energy production and innovation, and we are confident that they will be a valuable asset to the AHP."

The US is a global economic powerhouse. The White House announced, "The seven selected regional clean hydrogen hubs will catalyze more than \$40 billion in private investment and create tens of thousands of good-paying jobs – bringing the total public and private investment in hydrogen hubs to nearly \$50 billion."

GH2Clean is deeply committed to playing a pivotal role in the world wide transition to renewable and environmentally friendly energy technologies. Ron's broad networks in the United States, especially in California, will enable the AHP to establish important partnerships for the development of hydrogen industries in Africa. The AHP is excited to have GH2Clean on board and look forward to their contributions to our team!"

About GH2Clean

GH2Clean recognizes that the shift to green and natural hydrogen is not merely a local or regional endeavour but a global imperative. GH2Clean is deeply committed to playing a pivotal role in this worldwide transition by spearheading initiatives aimed at the design, development and construction of advanced green and natural hydrogen infrastructure on a global scale.

From its inception, GH2Clean has placed strong emphasis on collaboration and partnership with stakeholders across continents. By forging strategic alliances with governments, industry leaders and research institutions worldwide, GH2Clean aims to leverage collective expertise and resources to accelerate the adoption of green hydrogen technology.

About the AHP

The African Hydrogen Partnership (AHP) is the only continent-wide non-profit African umbrella association dedicated to the development of green and natural hydrogen, hydrogen-based chemicals, fuel cell technology and related business opportunities in Africa. It facilitates the collaboration between governments, industry, technology and financial institutions and large end consumers of hydrogen across regions with a focus on Africa, Europe, the Middle East, Asia and the Commonwealth. The Partnership campaigns and lobbies for green African hydrogen and makes compelling political propositions for the benefit to Africa and other continents of developing green hydrogen economies. The AHP is confident that green and natural African Hydrogen will materially assist the World to decarbonise and assist in African Hydrogen becoming a major component in the energy mix. To help form the strongest possible international alliance for utilizing Africa's hydrogen potential and creating green wealth, organizations from anywhere in the world are welcome to join the AHP and become a member.
